

Parts 2 and 3 (Calculating and Analyzing Your Ecological Footprint)

Now that you have calculated and printed your Ecological Footprint, answer the following questions using data from your results and class discussions. Please attach a copy of your Ecological Footprint results to the back of your handout.

[DLL2]

- 1) How does your ecological footprint compare to the average for the United States? The equal Earth share?

- 2) Using your “Quiz” results, in which area(s) could you make the greatest change to reduce your footprint? Please explain your choice and what you could do to make that change. (Be realistic about what would make sense for you personally.)

- 3) After watching the videos of Penn State University’s Center for Sustainability, what if any additional strategies could you use to make your natural resource use more equal when thinking about the rest of the world?
